

We are currently modifying our online brochures and will post our new MEP Engineering brochure shortly.

Jarmel Kizel's MEP engineers understand that a building's systems must work seamlessly as one, whether in new construction, renovation or adaptive reuse projects. Our decades of experience in mechanical, electrical, plumbing and fire protection system design extends from office, retail, multifamily, educational and industrial buildings to sophisticated pharmaceutical and biotech laboratory facilities. Our experience includes energy efficient generator and boiler designs, redundant cooling systems, fire suppression for trading floors and data centers, and special applications for medical facilities and laboratories.
