

We are currently modifying our online brochures and will post our new Civil Engineering brochure shortly.

Jarmel Kizel's civil engineering studio offers a team of engineers whose unique skill sets help achieve exceptional results for any type of project. Our commitment to quality service and dedication to outstanding performance—from feasibility analysis through project completion—enables our civil engineering studio to streamline timelines and provide value engineering to bring the cost savings to your project.

We scrutinize each project design to anticipate potential obstacles at every level of approval. From local ordinances to federal regulations, and environmental permits to transportation access permits, we apply our expertise to every aspect of the process. Our team can navigate the bureaucracy of entitlements, expedite approvals and speed project completion. Our expertise is also recognized by municipal planning and zoning boards and the regulatory agencies at the state and federal levels, where we offer fact-based public testimony on storm water management, wetlands, environmental and other civil engineering issues.

We Understand:

- Site Plan Design
- Land Surveying
- Subdivision Design
- Feasibility Studies
- Community Associate Services
- Planning Services
- Storm water Management
- Septic System Design
- Environmental Consultation
- Traffic
- Professional Planning Services
- Regulatory Compliance
