Jarmel Kizel rises to occasion as new Tribeca Oven bakery takes shape

Jarmel Kizel Architects and Engineers, Inc. is providing architectural and engineering services for a 115,000 s/f production bakery for Tribeca Oven.

Artisan bakers, Tribeca Oven is committed to the authentic craft of small batch baking, producing all natural, high quality par-baked frozen breads and shipping them nationwide to specialty food distributors, grocery retailers and restaurant groups.

Located at 425 Gotham Parkway in Carlstadt, NJ, this warehouse building is connected via two enclosed passageways to 447 Gotham Parkway, Tribeca's current, 48,000 s/f facility.

Over the last six years, the demand for Tribeca's par-baked bread has rapidly increased and has created the need for this larger, state-of-the-art production facility.

"This is an outstanding project utilizing the full array of our services—every discipline within our firm including architectural and structural, MEP and civil engineering—is working on the design of Tribeca's new production bakery," commented Matthew B. Jarmel, AIA, MBA, and principal with Jarmel Kizel. "We are pleased to assist Tribeca in meeting its need for this new space and look forward to the continued success of its business."
